Project – Valuation of a listed company

Project objective

The objective of this project is to put into practice the knowledge acquired during the introductory course in corporate finance. Working in pairs, you will be required conduct a financial analysis of Rexel in order to recommend whether or not to acquire a stake in the company.

A PowerPoint presentation (converted to PDF) of no more than 15 slides must be sent to david.heller@dauphine.psl.eu before the 3rd November.
Any delay will result in a penalty of points.

Recommendations: cite the sources of the data used; each slide should contain essential information without visual overload; use graphs, tables, and diagrams to illustrate your points.

Expected content in the document

Your presentation will include the following sections:

- Market overview: analysis of the market in which the company operates (size, trends, competition, risks, opportunities)
- Company overview: description of main activities, operating segments, competitive advantages, and strategic positioning
- Valuation results based on the methods used, with explanations of the assumptions made (growth rate, discount rate, etc.) for the DCF method and the choice of companies included in the sample for the market comparables method
- The submission of an LBO-style bid by an investment fund.
- Interpretation of results: critical analysis of the results obtained (consistency with market data, sensitivity to assumptions)
- Investment recommendation: clear and structured argument justifying your position on whether or not to acquire a stake

Evaluation criteria:

- Quality of market and company analysis
- Relevance of assumptions and methodological rigor of valuations and bid
- Clarity and accuracy of interpretation of results
- Quality of investment recommendations
- Visual presentation and clarity of supporting materials
